EDUCATION

McGill University

B.A Computer Science, Fourth Year

Montreal, Canada

Sep. 2019 – Present

- Courses: Data Science, Software Design, Web Development, Algorithm Design
- Hackathons: CTF Hackathon, HackOS-AGI Hackathon, PolyFinances-DataThon, CodeJam

EXPERIENCE

McGill University, Computer Task Force

Web Developer

Website Montreal, Canada

Aug 2024 - April 2025

- Developing the school's election website using **Vue.js**, **Node.js**, **HTML**, **CSS**.
- Implementing GitLab **CI/CD** to manage the full software development lifecycle from feature branching to automated builds, tests, deployment of the website.
- Secured the voting process for 300+ students by integrating OAuth 2.0, preventing unauthorized access and enforcing McGill-only email validation.
- Updated old dependencies and added automated linting/formatting to enforce project-wide coding standards.

McGill University, Data Science Research Lab

Research Student

GitHub Montreal, Canada

Jan 2025 - May 2025

- Engineered a comprehensive bot detection for a competitive environment, achieving a **68%** detection rate by integrating fine-tuned models with machine learning on user metadata.
- Aggregated text data from competition APIs and web-scraping, and processed using MySQL for model training.
- Trained BERT and RoBERTa models using **TensorFlow**, creating a system prepared for scalable training and deployment using **AWS** (SageMaker, S3).

Korean Air Force

Radio Decryption Technician

Seongnam, South Korea

Sep 2021 - Jul 2023

- Decrypting radio communications using Morse Code from North Korea to identify their training schedules.
- Build a Python-based application using **Selenium** to parse and input complex location data into a military website, cutting data entry time by **80%**.

PROJECTS

Personal Finance Tracker

GitHub

- Built a personal finance tracker that has React-based expense tracking dashboard, to provide a intuitive platform for managing financial data.
- Developed a secure backend with **REST API** using Node.js, Express and TypeScript with **JWT** authentication ensuring data privacy through API endpoints.
- Containerized the application stack with **Docker**, enabling consistent deployment across AWS **EC2** instances.

Data Science Project - Analyzing Movie News Coverage

Paper

- Created comprehensive analysis with teammates for news reporting on "The Substance" (2024) focusing on article topics and public reception.
- Processed a complete data collection using NewsAPI, which automated the processing of 3,000+ articles from 20+ sources and reduced manual effort by 90%.
- Applied **TF-IDF** with **Pandas** to identify important keywords to compare the relevance of "The Substance" with other recently released movies in categories such as streaming, reviews, and box office.

SKILLS

Coding: Python, Java, Node.js, SQL, JavaScript, Bash, Unix, HTML, CSS

Libraries: React, JWT, Tensorflow, Scikit-learn, Huggingface, Matplotlib, Pandas, Bokeh, PyAutoGUI

Frameworks: JUnit, Express, Vue.js, Django, Flask

Tools: Git, Docker, CI/CD, AWS (SageMaker, EC2, S3), PostgreSQL, Selenium, MySQL, Jupyter
