EDUCATION

- **McGill University** Montreal, Canada
B.A Computer Science, U2 *Sep. 2019 – Present*
 - Courses: Data Science, Software Design, Web Development, Algorithm Design
 - Hackathons: CTF Hackathon (2024), HackOS-AGI Hackathon (2024), PolyFinances-DataThon (2024), CodeJam (2024)

EXPERIENCE

- **McGill University, Computer Task Force** Website Montreal, Canada
Web Developer *Aug 2024 - Present*
 - Developing the school's election website using **Vue.js**, **Node.js**, **HTML**, **CSS**.
 - Implementing GitLab **CI/CD** for automated builds, tests, and deployment of the website.
 - Mitigated unauthorized voting risks by validating user identities via **OAuth 2.0** and enforcing domain-specific email checks, reducing potential attacks from non-McGill accounts.
 - Updated old dependencies and added automated linting/formatting to enforce project-wide coding standards.
- **Korean Air force, Unit 777 Command** Seongnam, South Korea
Radio Decryption Technician *Sep 2021 - Jul 2023*
 - Decrypting radio communications using Morse Code from North Korea to identify their training schedules.
 - Automated the data inputting process using **Selenium**, reducing the time required to enter missile trajectories and aircraft paths by 70%.
- **McGill University, Data Science Research Lab** GitHub Montreal, Canada
Research Student *Jan 2025 - Present*
 - Training BERT and RoBERTa models using **TensorFlow** to identify bot comments, achieving 68% detection rate.
 - Aggregated competition data with web-scraped datasets, and processing using MySQL for training the model.
 - Developed an automated shell script to streamline the build and testing process.
 - Implemented **Docker** to containerize the project, simplifying deployment and scaling.

PROJECTS

- **Data Science Project - Analyzing Movie News Coverage** Paper
 - Created comprehensive analysis with teammates for news reporting on "The Substance" (2024) focusing on article topics and public reception.
 - Leveraged NewsAPI for web scraping to collect movie data from various news sources.
 - Applied **TF-IDF** with **Pandas** to identify important keywords to compare the relevance of "The Substance" with other recently released movies in categories such as streaming, reviews, and box office.
 - Created statistical visualizations using **Matplotlib**, illustrating the differences in media coverage and public reception.

SKILLS

- **Coding:** Python · Java · SQL · JavaScript · Bash · Unix · Node.js · HTML · CSS
- **Libraries:** React · PyAutoGUI · Tensorflow · Scikit-learn · Huggingface · Matplotlib · Pandas · Bokeh · BeautifulSoup
- **Frameworks:** JUnit · Vue.js · Django · Flask
- **Tools:** Git · Selenium · Docker · CI/CD · MySQL · AWS · Jupyter
